

## The 1/4" flow APC Series couplings feature a plastic thumb latch, fewer moving parts and a smooth contoured design to deliver ease-of-use and excellent flow in a compact size. The APC Series includes couplings with valves and thumb latch shrouds. A more rugged design on some models adds durability to increase the APC's application range.

FEATURES	BENEFITS				
Plastic thumb latch	No exposed metal parts				
Shrouded thumb latch	Protects against accidental disconnects				
Integral terminations	Fewer leak points, shorter assemblies, faster installations				
Compatibility	Mates with most EFC couplings

WARNING: Pressure, temperature, chemicals, and operating environment can affect the performance of couplings. It is the customer's responsibility to test the suitability of CPC's products in their own application conditions.

These graphs are intended to give you a general idea of the performance capabilities of each product line. The shaded area of each graph represents the operating range of the product family, i.e., upper and lower values are shown. Therefore, depending on the exact coupling configurations selected, you can reasonably expect values to fall within the shaded area.

## THE SHELF LIFE OF A CONNECTOR IS DEPENDENT UPON THE CONNECTOR

MATERIALS AND THE STORAGE CONDITIONS. CPC manufactures quick disconnect couplings and connections made from a variety of metal, plastic and elastomeric raw materials. In general, it is best to store any CPC product in an environment shielded from light at a temperature between 50°F and 90°F.

The shelf life of CPC couplings and connections is estimated to be 3 years minimum if the storage conditions comply with those shown above.

Note: For product containing lubricated o-rings, the lubricant will dry out over time. Prior to use, it may be advisable to relubricate external o-rings. For product containing silicone o-rings, if lube is allowable, use of a synthetic lube is recommended.

## Liquid Flow Rate Information for Couplings

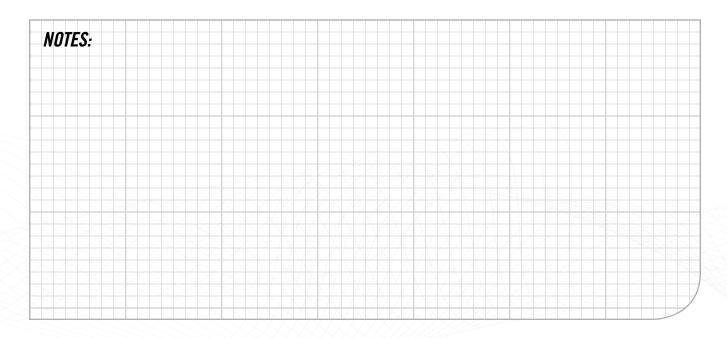

The chart below shows the flow rate for CPC couplings. Each coupling was tested with water at 70°F (21°C). To determine flow rates for specific coupling configurations use the formula at the right.

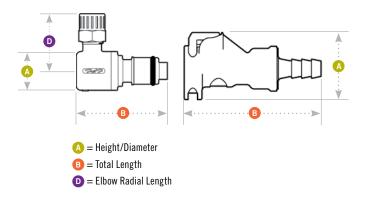

- Q = Flow rate in gallons per minute
- $\mathbf{C}_{\mathbf{v}} = \text{Average coefficient across various}$ flow rates (see chart)
- $\Delta P$  = Pressure drop across coupling (psi)
- S = Specific gravity of liquid
